

Section 1: Three-Level Style Chain

BaseCustom: 14pt bold blue, 12pt space-after. MidCustom inherits bold+blue, overrides to 12pt, 6pt space-after. LeafCustom adds italic, inherits everything else.

BaseCustom style: 14pt, bold, blue, Times New Roman

MidCustom style: 12pt (overridden), bold (inherited), blue (inherited)

LeafCustom style: 12pt (from Mid), bold (from Base), blue (from Base), italic (own)

Section 2: Run-Level Override on Deep Style

*LeafCustom with default blue color, then **this run overrides to red** and back to inherited blue.*

Run overrides: unbold (cancels inherited bold), 18pt (overrides 12pt from Mid)

Section 3: Paragraph-Level Spacing Override

LeafCustom with explicit 24pt space-before (not in any ancestor)

MidCustom with space-after overridden to 0 (was 6pt from style, 12pt from Base)

BaseCustom (12pt space-after) for visual comparison

Section 4: Four-Level Font Family Chain

Level1: Georgia 14pt gray. Level2: Courier New (overrides font), adds bold. Level3: Arial (overrides font), adds italic, 11pt. Level4: inherits Arial+bold+italic, adds red+underline+indent.

Level1: Georgia 14pt, dark gray color

Level2: Courier New (override), bold (own), 14pt+gray (from Level1)

Level3: Arial (override), italic (own), 11pt (override), bold+gray (inherited)

Level4: Arial+bold+italic (inherited), red+underline (own), 11pt (from L3), indented

Section 5: Character Style Chain

Normal paragraph with character styles applied to runs. BaseChar: Georgia bold 14pt green. MidChar: adds italic, overrides to 12pt. LeafChar: adds underline, overrides to purple.

Normal text, then **BaseChar: Georgia bold 14pt green**, then normal again.

Normal text, then ***MidChar: italic+bold (inherited), 12pt (override), green (inherited)***, then normal again.

Normal text, then **LeafChar: underline+italic+bold (inherited), purple (override), 12pt (from Mid)**, then normal again.

Section 6: Three-Way Conflict

Paragraph style (BaseCustom) sets blue+bold. Character style (LeafChar) sets purple+underline+bold+italic. Run-level sets 20pt and unbold. The expected result is: purple (LeafChar overrides BaseCustom), unbold (run overrides both), italic (LeafChar), underline (LeafChar), 20pt (run).

Three-way conflict: para=blue+bold, char=purple+italic+underline, run=unbold+20pt
